

Chlorease Addendum for Tuff Pools:

This Addendum replaces Steps 4 thru 7 of the INSTALLATION Section of your Chlorease Instruction Manual!!!

1. Hang the Chlorease unit onto the rail of your pool, as shown. Keep the chlorinator vertical. Make sure you meet the minimum water level requirements pictured in the Chlorease Instruction Manual.

2. Hold the smaller metal piece against the underside of the rail and push up; then tighten up the 2 screws that hold the 2 pieces together.

3. Adjust the 2 hex socket head set screws until the metal clamp grips the rail tightly.

Slide the smaller plastic up and attach it to the lower part of the metal clamp by the 4 smaller screws. Tuck the wire in the trough of the metal clamp.

4. Cover the metal clamp with plastic cap. Push it down until it fits snugly with the chlorinator.

The transformer should be mounted to a convenient surface.

Note: For round pools, place the small rail adapter (provided) onto the rail prior to hanging the metal clamp. (see picture left)
